

socks. First Unitika asked the group of volunteers to spend a day without socks so that the typical amount of leg swelling could be measured. They would then spend a day wearing the compression socks, and their measurements taken again. That wasn't so easy, though—the standard liquid displacement measurement techniques, in which the volume of the legs was measured by gauging the water level in a container of water, didn't work so well as the leg was too small to present an accurate measurement. As an alternative, Unitika decided to try structured light scanning. They obtained a scan3Dmed 3D scanner from SMARTTECH, a metrologically certified device that can obtain high-quality color scans by projecting strips of light on a surface. In addition to being used in aerospace and automotive applications, it's completely safe to use on human skin, and the 3D scanner's large volume – 800 x 600 x 350 mm – means that a large area can be scanned, such as the legs, arms, chest and face. The short scanning time of less than 0.7 second helped as well, because such a short period of time reduced the impact of the respiratory system on the scan results.

Using SMARTTECH 3D measure software and a rotary stage, Unitika was able to automate the 3D scanning process. The results provided them with all the information that they needed for the study. The scans showed that without compression socks, the typical volunteer's leg increased its volume by 2% from morning to evening, returning to its original state by 10 AM the next day. They tested two types of compression socks: Type B kept the leg from swelling, while Type A actually reduced its volume by 2%. Software added to the optical scanner also allowed Unitika to measure the diameter of the perimeter of the leg for further investigation. The 3D scanner and its software, Unitika concluded, were fully sufficient to carry out all the tests they needed to carry out, and provided precise results that other methods of testing were not capable of. Unitika then compiled all of the data gathered and presented it to the client in the form of a report.

Over 390 Indian companies showcasing at Heimtextil

More than 390 Indian companies have come together together to showcase the country's textile expertise at the world's biggest fair for interior textiles – Heimtextil Frankfurt this week. The India Pavilion at the trade fair, which hosts India

as the second largest participating country, was inaugurated by the country's textiles minister Smriti Irani.

Heimtextil is regarded as the biggest and most important international platform for home furnishings and textiles. As the first trade fair of the year for its sector, Heimtextil 2018 will be a trend barometer for the whole business year, spotlighting new trends and innovations in interior textiles, home furnishings, household textiles and a range of allied services.

Among the companies exhibiting at Frankfurt are India's leading players like Alps Industries, D'Decor, Reliance, Shri Laxmi Cotsyn, Trident and Welspun. Also representing India's design talents is the winner of Interior Lifestyle Awards 2017 (home textile category) Anshul Malhotra who has carved her journey from Himachal to handloom heart in Delhi to Frankfurt and showcases a collection of home textiles and traditional handloom designs in home furnishing and fabrics made with yak wool, Himalayan sheep wool, and silk wool.

Leading government bodies including The Cotton Textiles Export Promotion Council (TEXPROCIL), Handloom Export Promotion Council (HEPC), and Export Promotion Council for Handicrafts (EPCH) are participating collectively with over 390 Indian manufacturer-exporters, marking the 2nd largest participating country among the exhibiting companies, second only to China. In the domestic arena, Indian home textile industry is expected to expand at a CAGR of 8 per cent and reach \$5.29 billion by 2018.

Saudi Aramco to set up textile factory in Hail

Saudi Aramco recently signed a memorandum of understanding with Nesma Holding Company, al-Alliaa Foundation of Infrastructure Development, and Hail Charity to set up a textile factory in Hail city in north-western Saudi Arabia. The factory will train workers in sewing and embroidery, production line work and create a healthy and productive work environment.

The agreement was signed by Hail governor Prince Abdulaziz bin Saad bin Abdul Aziz, vice president of Aramco Nasser bin Abdul Razzaq al-Nafisi, Nesma's Saleh Bin Ali al-Turki, Eng. Abdullah bin Ibrahim al-Rakhis of al-Alliaa Foundation and Hail's Saud Fahd al-Abdah, according to a press release from the company. Nafisi stated that this MoU represents one of Aramco's initiatives in the field of citizenship, emphasizing the importance of women's participation in the market.

World Textile News

Heimtextil hosts 2,975 companies presenting innovations

Heimtextil, the biggest international trade fair for home and contract textiles, is hosting 2,975 companies from various parts of the world, showcasing design innovations. Focusing on the textile interior design, the ongoing trade fair is presenting a large selection of bed linen, bedding, mattresses, bathroom textiles and table and kitchen linen. "Heimtextil is on a growth course for the eighth consecutive year and is continuing its remarkable success story in a challenging market. Over the next few days, we will be experiencing a globally unique design show with a variety of product innovations and textile inspirations by international market leaders," said Detlef Braun, CEO of Messe Frankfurt, organiser of the fair that will conclude on January 12.

The high-calibre event programme with renowned industry experts is highlighting themes related to furnishing trends and design, architecture and the hotel industry. In halls 8 to 15, around 1,500 suppliers are presenting ready-made products in the bed, bath and table segments. The bedding offer stands out here as the world's largest range of such products.

Martin Auerbach, managing director of the Association of the German Home Textiles Manufacturers, is pleased about the continuation of the trend towards more materiality in private and public spaces. "Home textile products are again significantly more visible than they were a few years ago. This confirms the signals we have observed over the past one to two years. The diversity of home textiles products, designs and colours makes the international trade fair platform for

home textiles a trailblazing annual event to start the year".

A new section 'All about pets' has been introduced at Heimtextil. The new product group presents selected suppliers of textiles and accessories for animals. Further, a central role in the trade fair's programme is played by the range of contract furnishings and fittings, which Heimtextil sums up under the title 'Interior Architecture Hospitality'. This segment is specifically aimed at architects, interior decorators, interior designers, project planners and hoteliers.

Titled "The future is urban", the Theme Park at Heimtextil is a trend and inspiration area for visitors and exhibitors alike looking forward to a wealth of material innovations, colour trends and new designs. For the 2018/19 season, a team of seven international design studios have isolated the most important themes from various general trends.

SMARTTECH 3D Scanner Gets the Job Done for Textile Measurement Study

Unitika Garments Technology is a Japanese research agency that examines the medical impact of textiles. Its research includes measuring the human body to assess the impact of garments on it as well as conducting chemical and bacteriological analysis to test hygiene levels. One recent study involved the testing of a particular compression sock. The client wanted to verify the effectiveness of their compression socks and understand their impact on the body, so Unitika set out to measure the level of swelling of the legs of a group of volunteers on a typical day, both with and without the

told Financial Tribune. "The first of the three, carrying 50 containers measuring 40 feet each, left China's island province Hainan on December 28. The second and third set off on December 30 from Incheon Port and Shiyan in northwestern China, each loaded with 41 forty-foot containers. It will take between 14 to 15 days approximately for these cargo trains to arrive in Tehran," he added. The official noted that the trains are mainly loaded with automotive accessories and spare parts, household appliances and textile.

The first-ever train traveling the long route from China to Iran set off from Yiwu City in China's Zhejiang Province on January 31, 2016. It covered 10,399 km, passing through Kazakhstan and Turkmenistan, to reach the border station of Injeborun after 14 days. The second freight train departed from Yinchuan South Railway Station on Sept. 5, 2017, carrying some 560 tons of cargo, including mechanical equipment, ceramic tableware, crystalware and automobile accessories, worth around \$1.6 million.

1st Phase of Renovations in Carpet Museum Complete

A ceremony was held in Tehran's Carpet Museum on Monday to mark the conclusion of the first phase of the renovation project in the four-decade-old building.

The officials of Iran's Cultural Heritage, Handicrafts and Tourism Organization attended the event.

"Renovations were conducted on the underground floor, parts of interior sections and the Protection Unit's office, for which roughly 20 billion Rials (\$4.7 million) were spent," Parisa Beizaei, director of the museum, said. "In the second phase, panels and other extensions will be designed and a new building will be used to display items," she added.

Mohammad Hassan Talebian, cultural heritage deputy at ICHHTO, said the project is part of the renovation drive launched in the organization.

"When I took up the position at ICHHTO, the Carpet Museum's status was undesirable, but now the first phase of renovations is complete and other phases are on the agenda," he said.

The official added that over the past few years, no efforts had been made to maintain the museum and its storerooms, showcases and halls were in dire need of improvement.

"After the Carpet Museum, other museums of national importance must be improved because they can help boost

cultural tourism," he said. Talebian also said the Fatemi-Kargar Junction is capable of turning into a cultural zone as historical sites such as the Museum of Contemporary Arts, Laleh Park and Carpet Museum are located nearby.

Mohammad Reza Kargar, ICHHTO's director for museum affairs, said museums in Iran have been neglected for years.

"The 1970s was a golden age for museums in Iran, but they gradually declined until the last decade, which marked a period of severe downturn in their operations," he said.

Fresh attention has been directed toward these places over the past few years, the most significant example of which is the restoration and reopening of the Islamic section of the National Museum of Iran.

"The renovation of National Museum was implemented for the first time after 80 years since its launch," Kargar said.

Abdolaziz Farmanfarmaian took inspiration from traditional Iranian elements to design the Carpet Museum of Iran, with the facade of the building resembling a carpet loom.

It was officially launched as a museum in 1977. With an area of 12,000 square meters, the museum is located near Tehran's Fatemi-Kargar Junction.

A recent dispute over the construction of Metro ventilators within the buffer zone of the museum has not been fully resolved yet.

Tabriz Accounts for 35% of Iran's Handmade Carpet Output

The city of Tabriz in East Azarbaijan Province accounts for 35% of Iran's hand-woven carpet production. The east Azarbaijan Province has a share of more than 35% in Iran's handmade carpet exports. Tabriz is the capital of the northwestern Iranian province of East Azarbaijan. The carpet industry in East Azarbaijan has created 500,000 jobs.

According to Chairman of Iran National Carpet Center Hamid Kargar, more than 3 million square meters of handmade carpets are annually woven in Iran, two-thirds of which are exported and the rest meets domestic demand.

Trade Promotion Organization of Iran's latest statistics show the country exported \$312 million worth of hand-woven carpets in the nine months to Dec. 21, registering a 26% increase compared with last year's corresponding period.

According to Kargar, last year's total exports stood at \$359 million.

Iran Textile News

Iran handmade carpet exports up 31%

Deputy Head of Iran's Carpet Center for Economic Affairs Mohammad Mehdi Farshchi said Iran exported \$270 million worth of hand-woven carpets during the 8 months of the current Iranian year.

Speaking during a local ceremony in Qazvin on Monday night, Farshchi said the figure shows a 31% hike compared with the similar period of a year before.

Iran exported \$290 million hand-woven carpet in 2016, he said, adding the figure rose to \$359 million in 2016, rising by 3 percent in terms of weight and and 23 percent in terms of value. He added 29 countries are the main buyers of Iran's handmade carpets, among them are 13 Asian, 11 European, 4 Americans and 1 African country.

Japan, Germany, Italy, Switzerland, France, Britain, the UAE, Kuwait, Lebanon and Qatar are traditional markets for the luxury Iranian product.

He underlined that \$141 million worth of carpets were exported to the Asian countries.

Iran's carpet exports were hit hard by sanctions imposed on the country over its nuclear program. The United States—the biggest importer of Iran's handmade rugs—banned the import of Iranian carpets, among other products, in September 2010.

Iran's textile, leather sector exports up by 18%

value of Iran's textile and leather sector's exports increased by 18 percent to \$908 million during the first eight months of the

current fiscal year (started March 20, 2017), Masoud Kamali Ardakani, director general of Trade Promotion Organization of Iran(TPOI) for exports development, said.

The sector covers textile and clothing products, shoe and leather products as well as carpet, Kamali Ardakani said, the press office of the TPOI said in a statement.

Iran exported \$279 million worth of textile (23 percent increase) and clothing products (32 percent increase), \$117 million worth of shoe and leather products (14.5 percent increase) and \$512 million worth of carpets (including hand-made carpet) in the 8-month period, he said.

The export of machine-made carpet increased by 10 percent, meanwhile the country's hand-made carpet exports registered a rise by 28 percent in the period, the official added. The US, Germany, Japan, Iraq, Afghanistan, Turkey, India, Italy and Pakistan are main destinations of Iran's textile and leather sector's exports.

The export of hand-made carpets to Germany and Japan increased by 66 percent in the period, Kamali Ardakani said.

He added that export of textile products to Turkey increased by 45 percent, clothing exports to Afghanistan rised by 37 percent and leather exports to India hiked by 157 percent.

Three Freight Trains Due in Tehran from China This Week

The third, fourth and fifth cargo trains from China to Iran are due to arrive in Tehran by the end of January 2018, the deputy head of the Islamic Republic of Iran Railways, Mostafa Davoudi,

Interview with **Gerard Farre Escale** Process Improvement Engineer of TVE-ESCALE Company

Please introduce yourself and your background in textile industry.

I am from the city of Barcelona. I am 29 years old and educated from industrial engineering. My background in textile is from my childhood, indeed my family owned a textile machinery company so I have been involved in textile whole my life. And since 4 years ago I started working in textile machinery Company. Now we are trying to expand our activities to Asia and this the reason that I am in Iran.

Please explain the finishing machineries manufactured by your company.

We have washing machines for "continuous washing", "continuous dyeing", "bleaching", we also make jiggers in discontinuous. Our company is not a big company and around 20 people working there. Because most of our work drive by suppliers and we just make like the engineering project.

Tell about your company's export.

We have export to all over the world, while our main market is Europe and America. In fact, we have already sold machineries to China, Pakistan, Turkey, Australia, etc. Both in south America and in North America we have colleagues so we have sold many machineries in America. Anyway, in last year the market was not satisfying in America and we couldn't sell enough.

What is your opinion upon moving textile industry from Europe to Eastern

Asian countries like Pakistan, India, and so on, if it is true why that happening?

I believe that companies are looking for low production cost and want to cut the expenses so they move production sites to that Asian countries to benefit cheap labor.

Don't you think that nowadays Europe is more concentrated on technical textiles and technologies than production?

Yes, of course because they want to develop better products and high quality products to be able to compete for instance Asian countries.

Does your company have agency in other countries?

In India and Turkey we have our agencies but in China no, in fact in the past we had.

Why Iran market is important to you? What is your idea about textile industry in Iran?

Iranian market is quiet new for me; I don't have experience here while couple of companies show their interest for our machineries so I am here to develop this market. I arrived 2 days ago and I don't know a lot about textile industry of Iran.

You have visited a textile factory in Isfahan, can mentioned the strengths and possible weakness of the manufacturing process and machineries there?

In fact, I visited number of factories, one had good machineries and good

technologies, the other one was not acceptable with old machineries. I saw different type of factories.

Do you think the same situation in India or China?

They are different, when you go to China or Pakistan you see very big textile factories, indeed I haven't visit a lot of factories but the factories I visited were small.

Does Spanish governmental organizations support textile companies? No.

What do you think about imposing economic sanctions against Iran during the past years? This sanctions have effects on relations between Spain and Iran?

We have not had any actives in Iran yet but I think it is difficult for a company to export a product. For example, a company tried to send the samples to be tested but encounter complication.

Before traveling to Iran did you have any imagination about unsafety in the country caused by negative promotions and news?

Typically it is not true but due to the news about nuclear issue, etc. there should be some fears for traveler. At the beginning I was surprised because it was so much better than I thought and people are very nice and helpful.

Thank you very much introducing your esteemed company and sharing your opinions with our audiences.

EDANA LAUNCHES CALL FOR PAPERS FOR FILTRET[™] ASIA 2018
Event to be held in Shanghai from 4 to 5 December, 2018

11th January 2018 - Brussels - EDANA, the leading global association serving the nonwovens and related industries, has opened the call for papers for the 11th edition of FILTRET[™].

The event will run in conjunction with the 7th Filtration & Separation Asia (FSA) event (the largest filtration exhibition in Asia) and the 10th China Filtration & Separation Exhibition and is co-organised by the China Filtration Society (CFS), China Nonwovens Technology Association (CNTA) and UBM China.

The conference will feature presentations on the latest market trends and technical developments and processes in the field of filtration and ensure opportunities to network with industry peers and sector experts. Delegates will be able to combine their participation with a visit to the exhibition.

EDANA is now inviting papers on the following topics:

- Innovative filter media technologies
- Filtration equipment and devices
- Air filtration and liquid filtration
- Automotive filtration (oil, engine, cabin)
- Filter testing and standards

Presentations that are specifically relevant to Asia's challenges in air pollution control and indoor air quality are particularly welcome.

Persons interested in presenting are invited to send abstracts in English to giovanna.merola@edana.org or in Chinese to yaogb1941@sina.com. They should include a proposed title, 3-4 bullet points summarising the presentation, and full contact details of the speaker. The deadline for submission is 30 March.

For more information about the event, please visit: <https://www.edana.org/education-events/conferences-and-symposia/event-detail/filtret-asia-2018/>

About EDANA

EDANA helps its members to design their future, serving more than 250 companies in the nonwovens and related industries, across over 40 countries. Its mission is to create the foundation for sustainable growth of the nonwovens and related industries through active promotion, education and dialogue.

About CNTA

CNTA is devoted to technical innovation and R&D in nonwovens and filtration and to promoting trade cooperation between Chinese companies and foreign partners. Besides, CNTA is organizing Shanghai International Nonwovens Conference & Exhibition (SINCE) and FSA together with UBM China for the benefit of the industry's development.

About UBM Asia

Owned by UBM plc listed on the London Stock Exchange, UBM Asia is the largest trade show organiser in the region and the largest commercial organiser in China, India, Malaysia and Thailand, covering 19 market sectors. Every year, UBM Asia connects over 2,000,000 buyers and sellers from 150 countries and regions. www.ubmasia.com

HANNOVER FAIRS USA

to launch DOMOTEX in the UNITED STATES

DOMOTEX USA (February 28 – March 2nd, 2019)

World's Top Trade Show for Floor Coverings to debut in Atlanta from February 28-March 2nd, 2019

Chicago - Hannover Fairs USA announced today that it will debut DOMOTEX USA focused on the American residential floor covering industry in Atlanta, Georgia from February 28-March 2nd, 2019 at the Georgia World Congress Center in Atlanta, Georgia.

Launched in 1988 in Hannover, Germany by Deutsche Messe, one of the world's top trade show organizers, DOMOTEX is the world's foremost showcase for floor coverings innovation. DOMOTEX USA will consist of exhibition space, conferences and education, featuring flooring and flooring innovations in one easy three day trade show in America's flooring capital, Atlanta.

Exhibitors will display the latest machine-made carpets, wall-to-wall carpeting, textile floor coverings, handmade rugs, resilient floor coverings, design flooring /luxury vinyl tile (LVT) and laminate flooring, parquet and wood flooring, as well as application and installation technologies designed for the residential flooring marketplace.

"Many industry representatives have been asking us for years to launch the DOMOTEX brand in the North American market, as there has not been a flooring trade fair in the eastern US that demonstrates the quality and breadth of the world's leading carpet and flooring show, the DOMOTEX Hannover," says Dr. Andreas Gruchow, Member of the Management Board, Deutsche Messe AG, Hanover. "In addition, given the strong economy in the US, much is being invested in commercial real estate such as offices, hotels and shops. The number of residential properties is also growing considerably. These are good conditions for the sale of floor coverings in the USA."

DOMOTEX USA will target North American-based professionals, including wholesalers and retailers of Carpets, Floor Coverings, Wood Flooring, LVT and, other innovative flooring products for Flooring Retailers, Home Builders, Developers, Floor Installers, and Home Improvement & Buying Groups. DOMOTEX USA will be organized and managed by Hannover Fairs USA (HFUSA), the U.S. subsidiary of Deutsche Messe.

"Launching DOMOTEX USA in Atlanta makes perfect sense because we can offer industry players across the Midwest, Northeast and Southeast the chance to both visit exhibitors on the show floor and to tour the area's manufacturing facilities," said Raymond Bianchi, Vice President, Events & Business Development at Hannover Fairs USA.

DOMOTEX USA is an extension of Deutsche Messe's worldwide portfolio of flooring events. With its premiere in February 2019, DOMOTEX USA leverages the power of the DOMOTEX global brand in North America, complementing the floor covering shows in Hannover, Shanghai and Turkey.

"With the introduction of DOMOTEX in Atlanta, we will showcase residential flooring innovations from the center of North America's floor covering marketplace, adding another vital Deutsche Messe event to our North American portfolio of shows," said Larry Turner, President and CEO of Hannover Fairs USA.

For further information, please contact Raymond L. Bianchi, Hannover Fairs USA at (773) 796-4250 or rbianchi@hfusa.com.

For exhibition and sponsorship sales, please contact Noel Hoekstra at nhoekstra@hfusa.com.

About Hannover Fairs USA

Hannover Fairs USA, Inc. (HFUSA) is the U.S. subsidiary of Hannover, Germany's Deutsche Messe – one of the world's largest and most active organizers of industrial technology events. Chicago, Illinois-based HFUSA helps U.S. companies expand domestically and internationally through exhibit and sponsorship opportunities at Deutsche Messe's worldwide portfolio of events.

Cost-efficient BCF yarn production for demanding processes with Sytec One from Oerlikon Neumag

Hannover/Neumünster, 11 January 2018 – Cost-efficient production of carpet yarns beyond commodity products can constitute a challenge. Highly standardized production systems must strike compromises with regard to throughput, quality or cost-efficiency. At the Domotex 2018, the world's largest trade fair for floor coverings, Oerlikon Neumag will present the Sytec One solution for demanding BCF processes.

The Sytec One is a BCF plant with only one end per position. Due to this single-end characteristic, it is particularly well suited for demanding production processes, such as recycled polyester or fine filaments. The reason: In the event of a yarn break, only one end breaks. All the other positions are not affected and continue to run. As a result, this plant has a higher efficiency compared with a multi-end technology plant. For example, with ten breaks a day, the efficiency of the Sytec One is still over 98%, while a three-end technology achieves only 92% efficiency.

Higher productivity due to the straight yarn path

The machine concept of the Sytec One with its absolutely straight yarn path in spinning and texturing also enables significantly higher process speeds compared to multi-end technologies. This results in a speed increase of up to 15%.

In addition to standard processes, more demanding processes with higher break rates play an increasingly important role. "The product mix is critical to the choice of technology," said Martin Rademacher, vice president of sales Oerlikon Neumag. "We are in the comfortable position of being able to offer our customers both a single-end and a three-end technology."

About Oerlikon

Oerlikon (SIX: OERL) is a leading global technology Group, with a clear strategy to become a global powerhouse in surface solutions, advanced materials and materials processing. Backed by the key ability to intelligently engineer and process surface solutions and advanced materials, the Group is committed to invest in value-bringing technologies that provide customers with lighter, more durable, more efficient and environmentally sustainable products. A Swiss company with over 100 years of tradition, Oerlikon has a global footprint of over 13 500 employees at more than 180 locations in 37 countries and sales of CHF 2.3 billion in 2016. The company invested CHF 94 million in R&D in 2016 and has over 1000 specialists developing innovative and customer-oriented products and services. For further information: www.oerlikon.com

About the Oerlikon Manmade Fibers segment

With its Oerlikon Barmag and Oerlikon Neumag brands, Oerlikon Manmade Fibers segment is the world market leader for manmade fiber filament spinning systems, texturing machines, BCF systems, staple fiber systems and artificial turf systems and – as a service provider – offers engineering solutions for the entire textile value added chain. As a future oriented company, the research and development at this division of the Oerlikon Group is driven by energy-efficiency and sustainable technologies. With the expansion of the product range to include polycondensation systems and their key components, the company now caters to the entire process – from the monomer all the way through to the textured yarn. The primary Oerlikon Barmag markets are in Asia, and – for Oerlikon Neumag – in the USA, Turkey and China. Correspondingly, Oerlikon Barmag and Oerlikon Neumag – with just under 2,500 employees – has a worldwide presence in 120 countries as part of the Oerlikon Manmade Fibers network of production, sales and distribution and service organizations. At the R&D centers in Remscheid, Neumünster and Chemnitz, highly-qualified engineers and technicians develop innovative and technologically-leading products for tomorrow's world.
